

## Make way for the MoSwing®

### The revolutionary concrete spacer!

Molenaar continues to work on innovative solutions.

Take, for example, the MoSwing®, another successful product development with which continue to underline our speciality. Even before we had finished our extensive tests the success of this cover spacer was an established fact.

### What makes the MoSwing® so special?

**New!**

### MoSwing®

- Perfect for use with shuttering having a **large** surface area and **heavy** reinforcement.
- It is "**invisible**"! Put it in place before the reinforcement in an irregular pattern and after pouring there will be hardly anything to see.
- It can be applied both **horizontally** and **vertically**.
- Its shape and length result in a **very stable** situation being created, so that the correct coverage is guaranteed.
- It is cost neutral.
- Tests show that the number per m2 is easy to determine. Our advice is 2 per m2.

**MOLENAAR**  
betonindustrie

Molenaar... supportive in concrete work!

## Molenaar Betonindustrie develops and manufactures for and with its clients.

The needs and desires of the client usually form the first step developing a new product. That is why we are the first to introduce the MoSwing® to the market, and just like all our other products it can also be produced in special environmental and strength categories as desired. Our internal quality department can provide certificates on request. The MoSwing® is supplied in B55, environmental class 5d as standard.

Molenaar, the "innovator" par excellence, also develops:

### MoClip®

Concrete spacers

- Saving up to 600% on costs
- Simple, quick and safe installation
- Concrete rot is out of the question
- Optimum adhesion

### MoStopper®

Watertight centring for **one third** of the current price!

### MoBikon®

35% lighter, maximum sealing by means of a deformable filling
